CONTENTS OF VOLUME 78

Number 1, March 1977

Gudrun Krauss and Horst Reinbothe. Purification and Fractionation of Free Nucleotides from *Euglena gracilis* Z by a Combined Procedure of Ligand-Exchange and Anion-Exchange Gel Chromatography 1

Phillip L. Coduti, Eric C. Gordon, and C. Allen Bush. Circular Dichroism of Oligosaccharides Containing *N*-Acetyl Amino Sugars 9

Phillip L. Coduti and C. Allen Bush. Structure Determination of *N*-Acetyl Amino Sugar Derivatives and Disaccharides by Gas Chromatography and Mass Spectroscopy 21

Robert F. Baugh, James E. Brown, and Cecil Hougie. Preparation and Platelet Aggregating Activity of ^{125}I-Labeled Ristocetin 39

M. Zimmerman, B. Ashe, E. C. Yurewicz, and G. Patel. Sensitive Assays for Trypsin, Elastase, and Chymotrypsin Using New Fluorogenic Substrates 47

Robert H. White and Lowell P. Hager. A Method for the Rapid Determination of Trace Organic Halogens in Lipids 52

Ariel Prunell, François Strauss, and Bernard Leblanc. Photographic Quantitation of DNA in Gel Electrophoresis 57

G. H. Lorimer, M. R. Badger, and T. J. Andrews. D-Ribulose-1,5-bisphosphate Carboxylase–Oxygenase. Improved Methods for the Activation and Assay of Catalytic Activities 66

Fred M. Hawkridge and Bacon Ke. An Electrochemical Thin-Layer Cell for Spectroscopic Studies of Photosynthetic Electron-Transport Components 76

G. Stanley McKnight. A Colorimetric Method for the Determination of Sub-microgram Quantities of Protein 86

William F. Tivol and William F. Benisek. Preparative Fractionation of Peptide Mixtures by Two-Dimensional Chromatography and Electrophoresis on Paper. Location of Peptides by Contact Printing 93

Roy E. Gingery. Improvements in Polyacrylamide Gel Slicing 106

Helena B. Nader and Carl P. Dietrich. Determination of Sulfate after Chromatography and Toluidine Blue Complex Formation 112

William R. Sherman, Paul M. Packman, Michael H. Laird, and Rita L. Boshans. Measurement of *myo*-Inositol in Single Cells and Defined Areas of the Nervous System by Selected Ion Monitoring 119

Benjamin C. Garrett and A. L. Underwood. Application of Gas–Liquid Chromatography to Phenol Oxidase Studies 132

David M. Nelson and John J. Goering. A Stable Isotope Tracer Method to Measure Silicic Acid Uptake by Marine Phytoplankton 139

A. Chiu and D. Eccleston. A High-Pressure Liquid Chromatographic Method for Measuring 3′,5′-Cyclic AMP in Brain 148

Thomas E. Dorsey, Paul W. McDonald and Oswald A. Roels. A Heated Biuret–Folin Protein Assay Which Gives Equal Absorbance with Different Proteins 156

Tatsuo Nakayama, Larry Munoz, and Roy H. Doi. A Procedure to Remove Protease Activities from *Bacillus subtilis* Sporulating Cells and Their Crude Extracts 165

George Dresdner and Hilda Cid-Dresdner. The Removal of the Neutral Detergent Tween 20 from Solubilized Membrane Proteins of *Acholeplasma laidlawii* and Other Proteins by Agarose-suspension Electrophoresis 171

RONALD C. GREENE. Improved Procedure for Synthesis of Radioactive *O*-Succinyl-L-Homoserine 182

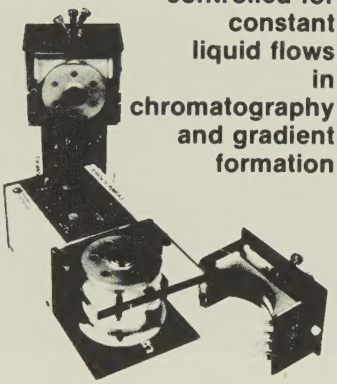
Pharmacia Peristaltic Pump P-3

A compact pump electronically controlled for constant liquid flows in chromatography and gradient formation



You can

- obtain three different flow rates at the same time through the three individually tensioned pumping channels
- change tubes in seconds with the snap-in cassette
- forget about pulsation thanks to the large driven rollers
- rely on a constant motor speed, electronically compensated for load and temperature
- use any flow rate between 0.6 and 400 ml/h per channel with the same gear box
- reverse the flow instantly
- push for maximum flow and clear pump lines rapidly

Electrophoresis with a difference

ISCO research electrophoresis apparatus can give you results you can't get in any other way. A precision power supply offers pulseless, constant power (constant wattage) to prevent overheating due to variations in system resistance, while still maintaining the highest possible separation speed. The exclusive dual buffer elution system of the Colora UltraPhor preparative slab gel apparatus gives you greater sample capacity and one tenth the dilution common to other equipment.

You always know what's happening in an ISCO density gradient/isoelectric focusing column: UV absorbance of the sample can be recorded as often as you want during separation. Analytical tube gels can be conveniently run in an ISCO in-line apparatus, and then scanned at UV or visible wavelengths in our high resolution (but low cost) gel scanner.

A rapid electrophoretic destainer and other accessories complete the ISCO research electrophoresis line. Send now for our catalog and technical bulletins to learn how you can expand your research without stretching your budget.

IMMOBILIZED ENZYMES FOR INDUSTRIAL REACTORS

Edited by **RALPH A. MESSING**
Corning Glass Works
Corning, New York

1975, 244 pp., $13.50/£6.50

Here is a comprehensive guide to the industrial applications of immobilized enzymes. It describes how to deal with the numerous problems generally encountered in initial research, development and final engineering programs for these applications. In so doing, it covers in detail the immobilized enzyme systems, including the carriers, the immobilization techniques, cofactor requirements, the reactors and carrier regeneration.

Throughout, the book teaches logical procedures for dealing judiciously with specific practical problems. For those new to the field, the book includes a review of enzyme chemistry and a chapter on the chemistry of glass: although glass may not be the preferred material for all applications, it does provide a model system that can serve as a standard for evaluating other materials.

This practical book should be of interest to chemical engineers, biochemists, food technologists, applied microbiologists, pharmaceutical chemists, agricultural engineers, biochemists and chemists.
